

National Survey

Conducted by the Marist Poll

MARIST
POLL

Nature of the Sample: State Armor National Survey of 1,455 Adults

This survey of 1,455 national adults was conducted February 26th through February 29th, 2024 sponsored by State Armor and conducted by the Marist Poll. Adults 18 years of age and older residing in the United States were contacted through a multi-mode design: By phone or online. Survey questions were available in English or Spanish. Phone and online samples were selected to ensure that each region was represented in proportion to its adult population. The samples were then combined and balanced to reflect the 2022 American Community Survey 5-year estimates for age, gender, income, race, and region. Results are statistically significant within ± 3.0 percentage points. There are 1,284 registered voters. The results for this subset are statistically significant within ± 3.2 percentage points. Tables include results for subgroups to only display crosstabs with an acceptable sampling error. It should be noted that although you may not see results listed for a certain group, it does not mean interviews were not completed with those individuals. It simply means the sample size is too small to report. The error margin was adjusted for sample weights and increases for cross-tabulations.

Nature of the Sample

		National Adults	National Registered Voters
		Column %	Column %
National Adults		100%	
National Registered Voters		88%	100%
Party Identification	Democrat	n/a	39%
	Republican	n/a	34%
	Independent	n/a	27%
	Other	n/a	1%
Gender	Men	49%	51%
	Women	51%	49%
Age	Under 45	46%	45%
	45 or older	54%	55%
Age	18 to 29	21%	19%
	30 to 44	25%	26%
	45 to 59	24%	24%
	60 or older	29%	31%
Race/Ethnicity	White	62%	63%
	Black	12%	13%
	Latino	16%	16%
	Other	10%	9%
Region	Northeast	18%	19%
	Midwest	21%	21%
	South	38%	37%
	West	23%	23%
Household Income	Less than \$50,000	34%	31%
	\$50,000 or more	66%	69%
Education	Not college graduate	62%	59%
	College graduate	38%	41%

State Armor National Survey. Interviews conducted by the Marist Poll February 26th through February 29th, 2024. National adults n=1,455 MOE +/- 3.0 percentage points. National Registered Voters: n=1,284 MOE +/- 3.2 percentage points. Totals may not add to 100% due to rounding.

How to Read Banners

'Banners' are a simple way to display tabular data. The following provides an explanation of how to read the banners.

1. Thinking of the entire table as a grid of cells, each cell contains a number. This number gives the *percentage* of respondents in a column in each cell.
2. Columns read vertically down the page.
3. The table headings present the people or subgroup each column represents. They are each noted with a letter.
4. The remaining rows present the column percentages for each valid response category to a question.
5. The banners include notations for statistical significance testing between columns. Each column is labeled with letters. If a capital letter is below a percent, it notes that this percent is statistically different at the 95% confidence level from the percent of the lettered column. If a lowercase letter is below a percent, it notes this percent is statistically different at the 90% confidence level from the percent of the lettered column. For example, in the banner below, the 90% in column D is statistically different from the 82% in column C and the 77% in column E at a 95% confidence level. Republicans are statistically more likely to report they support their state governments paying more for products from America and its allies than are Democrats and independents.
6. Please note totals may not add to 100% due to rounding.
